

Advanced features for protection and usability

Protection against the elements

Non-corrosive lock bodies mean that locks can be outside in any weather. Drainage holes to prevent freezing are standard on padlocks. Dust covers and protective shutters ensure mechanisms are kept clean and actions smooth. Protective bumpers on NE/NG cylinders prevent knocks to surrounding materials as well the lock itself.

Key security

Mul-T-Lock padlocks are available on all patented key platforms, offering additional key security. They are available in all of our saleable variants of keyed to differ, keyed alike and master keyed. All padlocks are supplied with a dedicated security card, which forms part of a strict security protocol required to obtain additional patented keys.

MTL™600
MTL™500
MTL™400
MTL™300

Keyed alike

Mul-T-Lock locks can be keyed alike. This means if you have two or more, they can be configured to allow you to operate them using the same key for all locks.

Master key

Where multiple padlocks are required as part of an overall security system, Mul-T-Lock master key systems enable each padlock to have its own key, yet authorised personnel can have a key which can open specified, or all padlocks, as desired.

The strongest of materials

Mul-T-Lock products are constructed from the most robust, weather resistant materials to hold up against the most determined attacker or extreme weather conditions. Padlocks and hasplocks have a hardened steel shell construction with a hardened boron steel shackle. Cutting-edge manufacturing processes such as black electrophoretic durable coating are frequently used.

Key retaining or non-retaining options

Mul-T-Lock's padlocks have the option to retain the key on opening. This ensures keys aren't lost and keeps hands and pockets free.

Smart features

Designed for extreme conditions the eCLIQ NG10 padlock is ideal for applications that require durability and protection against elements. The eCLIQ NG10 padlock is an extension to the wider eCLIQ portfolio. It is embedded with micro-technology that collects information about who, when and where the padlock has been accessed to provide you with complete audit trail activity.

Extensive high security locks to suit any exposed and challenging location

Mul-T-Lock offer a comprehensive range of robust locking solutions to suit the most demanding of uses and locations. Tried-and-tested against the highest of industry standards, they will stand the test of time, as well as the harshest of conditions. Whether this is simply securing a gate or shed, or protecting a high security facility requiring audit trail capability, Mul-T-Lock will have the lock for you.

NE/NG Padlocks

- CEN grade up to 6
- Case hardened steel body
- Hardened boron alloy steel shackle
- Black electrophoretic durable coating
- Highly secure double ball bearing lock mechanism
- Drainage holes deter freezing
- Protective bumper helps protect against damage
- Key retained when opened
- Patented key cylinder system

Typical applications

- Residential sheds, gates and toolboxes
- Compounds
- Car park gates
- Shipping containers
- Remote access
- Farms and livestock facilities
- High security areas

Motorcycle chain security

- SS101 Gold Standard
- Maximum security padlock
- Double ball bearing locking mechanism
- 14mm hardened boron alloy steel shackle
- Key retaining
- Drainage holes prevent freezing
- Black electrophoretic cylinder mechanism
- Mul-T-Lock's unique high precision pin tumbler system
- Pick and drill resistant for high security needs
- Reversible nickel silver key with plastic key head and coloured insert for identification
- Cylinder platforms: MTL™800, MTL™600, MTL™500, MTL™400, MTL™300

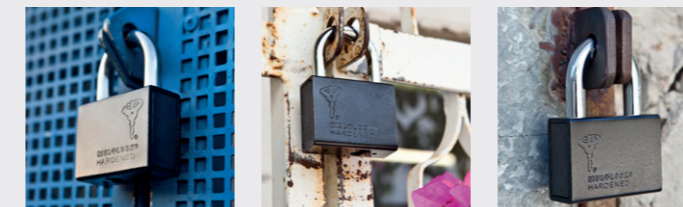

C-Series Padlocks

- CEN grade up to 5
- Mul-T-Lock's unique patented key cylinder system. Pick and drill resistant for high-security needs.
- Removable shackle with non-retaining key
- Variety of shackle clearances
- Black or nickel finish
- Option to add a hasp or shackle protector
- Made of hardened steel with hardened boron alloy steel shackle
- Protective shutter prevents dust contamination
- Drainage holes prevent freezing
- Cylinder options: Keyed different, keyed alike, master keyed
- Standards; ISI technical specification 21

Typical applications

- Residential sheds, gates and toolboxes
- Compounds
- Car park gates
- Shipping containers

MVP™2000

- Easy to use, easy to install
- Flexible keying options, such as an optional keyed-alike kit for rear and side doors or any other combination
- Wide-range of uses
- Reversible nickel silver key with plastic key head and coloured insert for identification. Also available in all nickel silver keys
- A push-to-lock mechanism means you don't need a key to lock up
- Robust, high precision aluminium lock structure

Hasplock Diamond

- Never lose a padlock again! - The padlock is an inseparable part of the hasp
- Stainless steel unit with locking bolt that cannot be removed
- Security level 5 according to EN 12320
- Unique product - all parts are joined together and cannot be lost
- Highly cost effective
- Highest weather resistance
- Available with Mul-T-Lock telescopic-pin cylinder platforms
- Installation by standard screws

Typical applications

- Telecom or IT facilities
- Industrial units and storerooms
- Military facilities
- Delivery trucks
- Containers and large cargo
